Channel” brand corn genetics are sourced globally and tested locally, allowing your Seedsman to bring you choices with superior performance potential. This year you’ll see a wide range of trait choices to protect the yield potential those genetics deliver: Genuity® SmartStax® RIB Complete™ corn blend, Genuity® VT Double PRO® RIB Complete™ corn blend, Genuity® VT Triple PRO® corn, YieldGard VT Triple® corn and Roundup Ready® Corn 2.

“My Channel Seedsman’s knowledge of our land is impressive and the service he provided me added a great value to the product.”

- Jerry Brenner, Burlington, CO
Convenience In a Bag

Channel now offers a line-up of Channel® brand Genuity® RIB Complete™ seed corn blends that eliminate the need to plant a separate, structured refuge. Your Channel Seedsmen can help you decide the best option for your fields.

### The All-In-One Corn Trait with Root, Stalk and Ear Protection
- **No more separate, structured refuge in the Corn-Growing Area**
- **Simple and convenient.** Fence row to fence row planting, thanks to this single-bag solution
- **95/5 blend of B.t. and non-B.t. seed for the lowest refuge in the Corn-Growing Area**
- **Broadest spectrum of above- and below-ground insect protection on trailed acres including two modes of action against corn earworm and corn rootworm**

*Refer to complete guidelines on page 10.*

### Above-Ground Protection, Single-Bag Convenience
- **No more separate, structured refuge in the Corn-Growing Area**
- **Simple and convenient.** Fence row to fence row planting, thanks to this single-bag solution
- **95/5 blend of B.t. and non-B.t. seed for the lowest refuge in the Corn-Growing Area**
- **Contains the first double-stacked trait with dual-modes of action for above-ground insects and maximum protection against corn earworm to increase yield opportunity**

*Triple-mode activity  ** Dual-mode activity  Single-mode activity  Modes of Action equals control of pest
1*"Roundup claims control of corn earworm on the Optimum® AcreMax® label. The Herculex XTRA label claims suppression only and Monsanto and Dow AgroSciences data suggests suppression only.
2*"In the Corn Growing Areas, Genuity® SmartStax® RIB Complete™ and Genuity® VT Double PRO® RIB Complete™ have no requirements for a separate structured refuge. However, in the Cotton Growing Areas, this product requires the planting of an additional 20% structured refuge.

### Convenience

**Start Strong. Emerge Strong.**

Help maximize the full benefits of Channel brand corn products with the early-season insect and disease fighting protection of Acceleron® Seed Treatment Products.

- **Insect protection:** Protection from secondary insect pests such as wireworm, seedcorn maggot and white grub
- **Disease protection:** Excellent protection from soil and seed borne diseases, including Fusarium, Rhizoctonia and Pythium

### Added Protection Against Nematodes

Channel brand seed corn is also available with Poncho®/VOTiVO®, a biological mode of action that introduces a new way to protect seedlings and roots against nematodes. The combination of Poncho®/VOTiVO® at the 500 mg/kernel and 1250 mg/kernel rate of Acceleron Seed Treatment Products offers complete protection against nematodes.

*All Refuge Configurations Require a Minimum of Four Rows

---

### Common Refuge:
A common refuge is a single field that serves as a refuge for both above-ground pests (e.g., corn borer) and below-ground pests (e.g., corn rootworm) at the same time. The refuge can be within the B.t. field or immediately adjacent to it.

### Separate Refuge:
A separate refuge is an option that requires two fields—one field which is adjacent to or within your B.t. field that serves as a refuge for below-ground pests (e.g., corn rootworm) and a separate field (up to 1/2 mile away) that serves as a refuge for above-ground pests (e.g., corn borer).

Several options/configurations not shown. Refuge configuration options represent percent requirement for the corn-growing areas. The percentage may be different for Cotton-Growing Areas.

This chart provided as a summary only. Growers must read the IRM Grower Guide prior to planting.

---

### Notes:

*Corn-Growing Area is defined as all counties of the following states:
AZ, CA, CO, CT, DE, IA, ID, IL, IN, KS, KY, MA, MD, ME, MI, MN, MT, ND, NE, NH, NM, NJ, NV, NY, OH, OR, PA, RI, SD, UT, VT, WA, WI, WV, WY, and in:
MO — All counties except Dunklin, New Madrid, Pemiscot, Scott, and Stoddard
OK — All counties except Beckham, Caddo, Comanche, Custer, Grady, Harmon, Jackson, Kay, Kiowa, Tillman, and Washita
TN — All counties except Carroll, Chester, Crockett, Dyer, Fayette, Gibson, Hardeman, Hardin, Haywood, Lauderdale, Lauderdale, Madison, Obion, Rutherford, Shelby, and Tipton
TX — Only the counties of Carson, Dallam, Hansford, Hartley, Hutchinson, Lipscomb, Moore, Ochiltree, Roberts, and Sherman
VA — All counties except Dinwiddie, Franklin City, Greensville, Isle of Wight, Northampton, Southampton, Suffolk City, Surrey, and Sussex

**Notes:**

- Excellent yield potential in high producing environments
- Broadly adapted west to east in the 80-90 RM zones
- Good option for early planting due to excellent seedling vigor
- Manage closely in areas of high Goss's Wilt pressure

#### CHARACTERISTICS CHART

**Notes:**

- Excellent yield potential in high producing environments
- Broadly adapted west to east in the 85-95 RM zones
- Early planting option, performs best at M-MH populations on a rotation or corn crop and cylinder conditions
- Good overall plant health, not recommended for fields with history of high Goss's Wilt pressure

### 96 RM

**NEW 196-77STXRIB BRAND BLEND**

Top-end yield potential with excellent seedling vigor and drought tolerance
- Best fit west and central in the 90–96 RM zones
- Good seedling vigor allows early planting, responds favorably to high population density
- Very good greenup and drought tolerance

**Characteristics Chart**

Notes:

### 99 RM

**NEW 199-29STXRIB BRAND BLEND**

Excellent top-end yield potential with very good greenup and drought tolerance
- Broadly adapted west to east in the 90-105 RM zones
- Very good Goss's Wilt tolerance
- Strong roots and nice field appearance
- Excellent top-end yield potential

**Characteristics Chart**

Notes:

### Characteristics Chart

- **Maturity**: The maturity of the corn variety
- **Ears/Row**: The number of ears per row
- **Bark Lean**: The lean of the ears
- **Fusarium**: The resistance to fusarium blight
- **Early Vigor**: The vigor of the young plant
- **Stalk Strength**: The strength of the stalk
- **Root Strength**: The strength of the roots
- **Goss's Wilt**: The resistance to goss's wilt
- **GreenSnap**: The resistance to green snap
- **Plant Height**: The height of the plant
- **Ear Height**: The height of the ear
- **Slag Green**: The resistance to slag green
- **Driftin'**: The resistance to driftin'
- **Yield**: The yield of the crop
- **Advantages**: The advantages of the variety
- **Test Weight**: The test weight of the crop
- **Goss's Wilt**: The resistance to goss's wilt
- **GLS**: The green leaf spotting
- **Adherance**: The adhesion to the plant
- **Guage**: The gauge of the crop
- **Insect Resistance**: The resistance to insects
- **Sudcufy**: The sudcufy resistance
- **FRG**: The Frogeye resistance

---

**Notes:**

- **Seedsmanship At Work**: Focus on effective seed placement and management practices.
- **Notes**: Additional information and considerations related to the variety.

---

**Channel 2013 Seed Guide**
Top-end yield potential backed by a solid agronomic package

- Well adapted west to east; moves south for early grain
- Best in rotation with soybeans on good producing soils
- Great for early harvest with fast drydown

**Channel** Brands

### Channel 2013 Seed Guide
Notes:  

Notes:
Solid performance potential with excellent agronomics and

drought tolerance

• Best adapted west and east in the 115 RM zone

• Very good Goss’ Wilt and green-

• standability provide a wide harvest

window; excellent drought tolerance

• Excellent yield potential under

various conditions with excellent stalks and roots

• Broadly adapted west to east in 110

and 115 RM zones

• Adapts to irrigation, dryland, and to all
crop rotations; best yield potential when
planted at 30-38 000 population

• Good late-season inactivity and

Stallability provide a wide harvest
window; excellent drought tolerance

• Widespread adapted west to east in 110

and 115 RM zones

• Good choice for reduced tillage

• Shining plant appearance with

good late-season plant health

Notes:

Notes:

Notes:

Notes:
**Very strong performance potential across yield environments with strong roots and drought tolerance**

- Broadly adapted west to east in the 115-118 RM zones; good western adaptation
- Best performance on soybean/corn rotation; handles low populations well, but biggest yield potential at 25,000 and higher
- Tolerant of late planting and drought tolerance potential across yield conditions

**Top-end yield potential with solid agronomics**

- Widely adapted west to east in the 115-120 RM zones
- Good heat and drought tolerance; stable across environments
- Overall good disease package; not recommended in areas with high Goss’s Wilt pressure

**Excellent silage potential for southwest High Plains and competitive yield potential in the Mid South**

- Broadly adapted west to east in the 110-120 RM zones
- Best grain yield potential on more productive soils in the Mid South; best populations around 30-35,000
- Lower test weight; very good stalks and roots

---

**“Recently, I was able to do side-by-side comparisons to see that Channel was the best performer, not only with good disease resistance, but also with standability and yield. I plant continuous corn and look to my Seedsmen for guidance with new products. He comes out to walk the fields with me and address any issues I’m having. He has always given good advice and I appreciate his input and experience.”**

- Duane VanWyk, Mitchellville, IA

- **VT3**: Genuity® VT Triple PRO®
- **VT3+**: YieldGard® VT Triple™
- **R**: Roundup Ready® Corn 2

**GDDs** Estimate is calculated from date of planting.

**Geographic Area**

Where the yield performance potential has been demonstrated.

---

**Rating System**

- 1 = Excellent, 9 = Poor, NR = Not Recommended
- * = Agromonic data is insufficient to make ratings at this time

**Plant Height**

- T = Tall
- M = Medium
- S = Short
- SL = Short-Low
- SH = Short-High

**Ear Height**

- T = Tall
- M = Medium
- S = Short
- SL = Short-Low
- SH = Short-High

**Harvest Appearance**

- R = Round
- D = Dwarf

**Test Weight**

- L = Low
- M = Medium
- H = High

**Goss’s Wilt**

- L = Low
- M = Medium

**Insect Resistance Management**

- A = Acceptable
- C = Caution
- W = Warning

---

**Notes:**

- Field and weather conditions may vary from area to area. The ratings in the charts are to be used as guidelines only. The limitations of warranty and liability on each bag of seed are part of the terms of sale thereof.
